

I CLAIM:

1. An auxiliary grip for an object, comprising:
5 an oversized member that fits over an existing handle or shaft of an object, and forms a handle for the object, wherein said member has an oval or elliptical cross-sectional shape.
2. A grip according to claim 1, wherein said member is a monolithic part.
3. A grip according to claim 2, wherein said part has a bore
10 for accommodating the existing handle or shaft of the object.
4. A grip according to claim 3, wherein said part is glued to the existing handle or shaft of the object.
5. A grip according to claim 1, wherein said member comprises at least two parts that are each provided with a recess and
15 that fit together such that said recesses accommodate the existing handle or shaft of the object.
6. A grip according to claim 5, wherein said two parts are glued together and/or to the handle or shaft of the object.
7. A grip according to claim 1, wherein said member is
20 made of cork, balsa, foam, rubber or other elastomeric material.
8. A grip according to claim 1, wherein said member is wrapped with material.

9. A grip according to claim 8, wherein said material is a grip-enhancing material.

10. A grip according to claim 8, wherein said material is a rubberized friction tape.

5 11. A grip according to claim 1, wherein said member has two ends, one of which has a greater cross-sectional area than does the remainder of said member.

12. A grip according to claim 11, wherein said larger end tapers down toward the remainder of said member.

10
